

Dear readers,

Summertime is travel time. In this issue, we would like to take you on a short trip to Italy, from Milan to Rome in the *Frecciarossa1000*. Then it's on to Berlin, where we are partnering with Siemens Energy and Vattenfall Wärme Berlin AG on a pioneering heat transition project. The next stopover is Wernigerode. Our 19th Technical Conference will take place there from 13th to 14th September. Be curious about our conference program here. Finally, at the terminus in Dresden, you will learn more about our latest development - a high-speed motor.

These are our topics:

- [High-tech drive systems for railway applications: Part 2 - ...](#)
- [Green heat in the city - VEM supplies motor for innovative heat conversion project](#)
- [Conference program of the 19th Technical Conference 2022 from 13th to 14th September in Wernigerode](#)
- [Press release: High-speed motor made in Dresden](#)

After many postponements and cancellations of events in the past two and a half years, we will be exhibiting at **several trade fairs** in the coming months. You can find out which ones in detail in this issue of Impulse.

We would also like to draw your attention to some of our **partners in The Netherlands, Egypt and Norway**.

We hope that you enjoy the read.

Best regards,
Your VEM team

High-tech drive systems for railway applications: Part 2 - ...

Development of a completely new, speed-controlled drive system for railway applications

Milan Central Station: 4 o'clock (p.m.) and one of Europe's fastest trains, the Frecciarossa1000, is already waiting for its passengers on platform no. 1. I'm standing on the platform and I'm on my way to Rome. The passengers will arrive in Rome, Termini station, after only 3 hours and 10 minutes of travel. In the past, they took twice as long to travel the 477 km route. ...
